

BUILDING A HOME SOC LAB IN AZURE

Abstract

This document demonstrate setting up of a SOC lab in Azure. It includes creation of honeypot and leveraging of Microsoft Sentinel and other security tools.

kaoneobopilwe5@gmail.com

Creation of resource group

-The 2 screenshot below demonstrate the creation of a resource group, the main key points was to ensure that the resource is created under my subscription. The region set in the resource group has to be used in both the virtual machine and virtual network.

After successful creation of the resource group, the name you named it has to appear under the resource group when you search for it. As shown in the picture below.

The next step was to create the virtual network, the most important details when creating this virtual network is to ensure that it is created under the resource group you previously created and the region is the same as the one set in the resource group. Below picture illustrate the creation of virtual network.

[Give feedback](#)

The next step was to create a virtual machine , same as the virtual network it is important to ensure that it is created under the resource group you previously created and in the same region. When naming virtual machine it is important to use a persuading name that will make attackers think that they are targeting areal worth assets. Below pictures demonstrate step by step creation of the virtual machine.

After the completion of creation of virtual machine , it should appear in the resource group you previously created. As shown in the below picture, we can see the virtual machine at the top(CORP-HR-DEPT-EAST-1), second is the ip address which was allocated and thirdly is the network security group(firewall).

Log On Into The Virtual Machine

The next step was to access the virtual machine to disable the internal windows firewall(this is only for the experiment to allow us to have a real experience on how security alerts occur)

Firstly I accessed the virtual machine I created and copied the IP address, that I later used to access the virtual machine.

I then typed remote desktop on the search bar and the above tab popped up , in the computer section I entered the IP address I copied from my virtual machine.

When creating the virtual machine they was a section where you are required to create log on details for the administrator account, those log on credentials are the one you input to log on. Th above picture illustrate where log on credentials are filled in.

After successful log on , I had access to the virtual machine, I then typed wf.msc on the search bar in the virtual machine . That allowed me to have access to the windows defender firewall properties, they will be tabs namely(domain, public, private profile) turn off the firewall state for each of them, then clicked apply and ok.

After successful turning off the firewall in the virtual machine , I copied the IP address from the virtual machine and then pinged on the powershell (on the local computer) to ensure that it is accessable. The below picture shows a demonstration

```

Creation Of Log Analytics Workspace

-The next step was to create the log analytics workspace which I utilized in analyzing the logs, same as VM and virtual network I ensured that I put the log analytics workspace in the same resource group and the same region. The pictures below illustrate the scenario.

Microsoft Azure Search resources, services, and docs (G+/) Copilot kaoneobopilwe5@gmail... DEFAULT DIRECTORY (KAONEOB...

Home > Log Analytics workspaces

Create Log Analytics workspace

With Azure Monitor Logs you can easily store, retain, and query data collected from your monitored resources in Azure and other environments for valuable insights. A Log Analytics workspace is the logical storage unit where your log data is collected and stored.

Project details

Select the subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

The next step was to create a sentinel which act as a SIEM ,for it to be created the log analytics need to be linked with it. So I added the already created log analytic workspace I created and was successful created as shown below

The next step was create the link between the virtual machine and the log analytics workspace , to perform that I accessed the Microsoft sentinel I previously created and clicked the content hub option after that I searched for security events. After the search they should be a Windows Security Event connector option below then I installed it , after the installation the option manage will show , I clicked on the Manage option. Then click on the Windows Security Events Via AMA and click open connector page options. As shown below

The next step was to create the data collection rule , which is used by virtual machine to forward logs into the log analytics workspace. I ensure that the data collection was on the same resource group I have been using then I clicked next, then next step appeared and I ticked all the boxes that where present . In the next step I selected the “All security events” option and and clicked create. As shown below

The Security Events After 20 Minutes

The screenshot shows the Microsoft Azure portal interface for a Log Analytics workspace named 'LAN-SOC-LAB'. The left sidebar contains navigation options: Overview, Activity log, Access control (IAM), Tags, Diagnose and solve problems, Logs (selected), Resource visualizer, Settings, Classic, Monitoring, Automation, and Help. The main pane displays the 'Logs' view for the 'SecurityEvent' table. The time range is set to 'Last 24 hours' and the number of results shown is '1000'. The table has columns: TimeGenerated [UTC], Account, AccountType, Computer, and EventSourceName. The data shows events from 2/20/2026, 7:08:42.634 PM to 7:08:42.141 PM, all from 'CORP-HR-DEPT-EA' with 'Microsoft-Windows-Security' as the event source. The bottom status bar indicates '5s 797ms' and 'Display time (UTC+00:00)'.

TimeGenerated [UTC]	Account	AccountType	Computer	EventSourceName
> 2/20/2026, 7:08:42.634 PM			CORP-HR-DEPT-EA	Microsoft-Windows-Security
> 2/20/2026, 7:08:42.634 PM			CORP-HR-DEPT-EA	Microsoft-Windows-Security

> 2/20/2026, 7:08:42.141 PM			CORP-HR-DEPT-EA	Microsoft-Windows-Security

The Security Events After 1hour 30 Minutes

The screenshot shows the same Microsoft Azure portal interface for the 'LAN-SOC-LAB' Log Analytics workspace. The 'Logs' view for the 'SecurityEvent' table is still active. The time range remains 'Last 24 hours', but the number of results shown has increased to '1000'. The table columns are the same: TimeGenerated [UTC], Account, AccountType, Computer, and EventSourceName. The data shows events from 2/20/2026, 7:41:19.968 PM to 7:41:19.211 PM. The accounts listed are 'CORP-HR-DEPT-EA\administrat...', 'CORP-HR-DEPT-EA\marketing', 'CORP-HR-DEPT-EA\administrat...', 'CORP-HR-DEPT-EA\lenovo', 'CORP-HR-DEPT-EA\operatore', and 'CORP-HR-DEPT-EA\administrat...'. All events are from 'CORP-HR-DEPT-EA' with 'Microsoft-Windows-Security' as the event source. The bottom status bar indicates '4s 285ms' and 'Display time (UTC+00:00)'.

TimeGenerated [UTC]	Account	AccountType	Computer	EventSourceName
> 2/20/2026, 7:41:19.968 PM	CORP-HR-DEPT-EA\administrat...	User	CORP-HR-DEPT-EA	Microsoft-Windows-Security
> 2/20/2026, 7:41:19.949 PM	CORP-HR-DEPT-EA\marketing	User	CORP-HR-DEPT-EA	Microsoft-Windows-Security
> 2/20/2026, 7:41:19.626 PM	CORP-HR-DEPT-EA\administrat...	User	CORP-HR-DEPT-EA	Microsoft-Windows-Security
> 2/20/2026, 7:41:19.511 PM	CORP-HR-DEPT-EA\lenovo	User	CORP-HR-DEPT-EA	Microsoft-Windows-Security
> 2/20/2026, 7:41:19.495 PM	CORP-HR-DEPT-EA\operatore	User	CORP-HR-DEPT-EA	Microsoft-Windows-Security
> 2/20/2026, 7:41:19.211 PM	CORP-HR-DEPT-EA\administrat...	User	CORP-HR-DEPT-EA	Microsoft-Windows-Security

As shown above in the first 5 minutes they were only 10 , after 30 minutes they had risen to 72 and after 1 hour and 30 minutes they are at 1000.

Below is one event I picked and tried to analyze, as it revealed the account name, timeline, IP address and the activity that happened.

The screenshot shows the Microsoft Azure portal interface for a Log Analytics workspace named 'LAN-SOC-LAB'. The left sidebar contains navigation options: Overview, Activity log, Access control (IAM), Tags, Diagnose and solve problems, Logs (selected), Resource visualizer, Settings, Classic, Monitoring, Automation, and Help. The main pane displays a query for 'SecurityEvent' logs. The 'Results' tab is active, showing a table with columns: TimeGenerated [UTC], Account, AccountType, Computer, and EventSourceName. The first result is for a log generated on 2/20/2026 at 7:41:07.116 PM, from account 'CORP-HR-DEPT-EA\silvia' (User type) on computer 'CORP-HR-DEPT-EA'. The event source is 'Microsoft-Windows-Security'. Below the table, a detailed view of the event is shown with fields: TenantId (bc34a9b9-feae-41b9-b287-ffbc78cfb791), TimeGenerated [UTC] (2026-02-20T19:41:07.1164269Z), SourceSystem (OpsManager), Account (CORP-HR-DEPT-EA\silvia), and AccountType (User). The bottom status bar indicates a query execution time of 4s 285ms and 79 of 1000 results.

TimeGenerated [UTC]	Account	AccountType	Computer	EventSourceName
2/20/2026, 7:41:07.116 PM	CORP-HR-DEPT-EA\silvia	User	CORP-HR-DEPT-EA	Microsoft-Windows-Security

TenantId	bc34a9b9-feae-41b9-b287-ffbc78cfb791
TimeGenerated [UTC]	2026-02-20T19:41:07.1164269Z
SourceSystem	OpsManager
Account	CORP-HR-DEPT-EA\silvia
AccountType	User

This screenshot shows the same Microsoft Azure Log Analytics workspace, but with a different query or filter applied to the 'SecurityEvent' logs. The 'Results' tab displays a table with columns: TimeGenerated [UTC], Account, AccountType, Computer, and EventSourceName. The first result is for a log generated on 2/20/2026 at 7:41:07.116 PM, from account 'CORP-HR-DEPT-EA\silvia' (User type) on computer 'CORP-HR-DEPT-EA'. The event source is 'Microsoft-Windows-Security'. Below the table, a detailed view of the event is shown with fields: EventID (4625), Activity (4625 - An account failed to log on.), AuthenticationPackageName (NTLM), FailureReason (%2313), IpAddress (185.218.138.3), and IpPort (0). The bottom status bar indicates a query execution time of 4s 285ms and 79 of 1000 results.

TimeGenerated [UTC]	Account	AccountType	Computer	EventSourceName
2/20/2026, 7:41:07.116 PM	CORP-HR-DEPT-EA\silvia	User	CORP-HR-DEPT-EA	Microsoft-Windows-Security

EventID	4625
Activity	4625 - An account failed to log on.
AuthenticationPackageName	NTLM
FailureReason	%2313
